

Nan guo energy storage

Overview

Can dendritic nanopolar insulators improve energy storage performance and stability?

We propose a microstructural strategy with dendritic nanopolar (DNP) regions self-assembled into an insulator, which simultaneously enhances breakdown strength and high-field polarizability and minimizes energy loss and thus markedly improves energy storage performance and stability.

Do sub-nanowires boost capacitive energy storage performance of polymer composites?

How does MgO incorporation affect nanodomain size?

By contrast, with MgO incorporation, the B-site cation displacement vectors become more disordered, and the nanodomain size decreases substantially to about 1 to 3 nm in the P 50 M 50 film (Fig. 2G and fig. S9).

What is $\text{NaNbO}_3 - (\text{Bi}_{0.5}\text{Li}_{0.5})\text{TiO}_3$?
