

New developments in shared energy storage

Overview

What is shared energy storage?

Shared energy storage leverages temporal and spatial reuse, integrating the diverse demands of multiple participants and taking advantage of the complementary nature of these demands to achieve efficient utilization in conjunction with renewable energy. Shared energy storage can be divided into demand-driven and profit-driven models .

Does a shared model improve the utilization efficiency of energy storage?

However, due to the absence of supporting policies for this function, the current utilization efficiency of energy storage is low. The shared model proposed in this paper can significantly improve the utilization efficiency and economic benefits of energy storage.

Does shared energy storage support the green energy transition?

This study proposes a shared energy storage strategy for renewable energy station clusters to address fossil fuel dependence and support the green energy transition. By leveraging the spatiotemporal complementarities of storage demands, the approach improves system performance and output tracking.

Why is shared storage important?

Consequently, from a long-term perspective, the shared storage model represents not only an effective means of addressing current challenges in the energy transition process but also a vital driving force propelling the future energy system toward a greener, more efficient, and sustainable development trajectory.

Can a shared energy storage strategy address fossil fuel dependence?

Renewable energy development and advanced storage technologies are key to reducing fossil fuel dependence and enabling the green transition. This

study proposes a shared energy storage strategy for renewable energy station clusters to address fossil fuel dependence and support the green energy transition.

What is shared energy storage (CES)?

CES is a shared energy storage technology that enables users to use the shared energy storage resources composed of centralized or distributed energy storage facilities at any time, anywhere on demand. Users won't need to build their ESS but pay for the energy storage services they obtain.
