

# **New energy storage system compliance project**

## Overview

---

WASHINGTON, D.C., March 28, 2025 — Today, the American Clean Power Association (ACP) released a comprehensive framework to ensure the safety of battery energy storage systems (BESS) in every community across the United States, informed by a new assessment of previous fire incidents at BESS facilities. How did NFPA 855 impact the energy storage industry?

In Maryland and New York, the energy storage industry supported new regulations that enforced the latest NFPA 855 requirements. In California, the industry offered a suite of policy recommendations to address unique safety questions arising from the Moss Landing incident, including enforcing key provisions of NFPA 855.

What is the difference between manufacturing and deployment of energy storage systems?

**Manufacturing:** Projects that manufacture energy storage systems for a variety of residential, commercial, and utility scale clean energy storage end uses. **Deployment:** Projects that deploy residential, commercial, and utility scale energy storage systems for a variety of clean energy and clean transportation end uses.

Are energy storage facilities safe?

“The energy storage industry is committed to a proactive and tireless approach to safety and reliability. At its core, energy storage facilities are critical infrastructure designed to protect people from power outages,” said ACP VP of Energy Storage Noah Roberts.

What is energy storage?

Energy storage encompasses an array of technologies that enable energy produced at one time, such as during daylight or windy hours, to be stored for later use. LPO can finance commercially ready projects across storage technologies, including flywheels, mechanical technologies, electrochemical technologies, thermal storage, and chemical storage.

Why should energy storage policy makers care about the Moss Landing Fire?

Policy makers will play an important role in helping to ensure batteries continue to be deployed responsibly and effectively. To that end, the energy storage industry has developed a three-part strategy that includes policy recommendations and safety requirements aimed at holistically addressing concerns generated from the Moss Landing fire.

What happened at Gateway energy storage facility?

On May 15, 2024, Gateway Energy Storage Facility in San Diego, California, experienced a BESS fire with continued flare-ups for seven days following the fire. The facility held about 15,000 nickel manganese cobalt lithium-ion batteries.
