Overview

Are electric vehicles causing a 'battery energy storage fire'?

With the growing number of electric vehicles and batteries for energy storage on the grid, more high-profile fires have hit the news, like last year's truck fire in LA, the spate of e-bike battery fires in New York City, or one at a French recycling plant last year. "Battery energy storage systems are complex machines," Mulvaney says.

What happened at Gateway Energy Storage in San Diego?

The fire broke out on Wednesday at the 250MW Gateway Energy Storage facility owned by grid infrastructure developer LS Power in San Diego. A fire crew managed to get the blaze at the 16,000-square foot facility under control after around 24 hours, lifting evacuation orders that were made.

What is the largest battery energy storage project in the world?

The San Diego battery facility came online in 2020 and was billed at the time by grid infrastructure developer LS Power as the largest battery energy storage project in the world. Using LG Chem Lithium-ion cells, it beat the previous record held by a 150MW project in Australia, although has since been surpassed by other facilities.

Did Vistra Energy smoulder after a fire?

According to project owner Vistra Energy, active flames were no longer observed after the second day of the fire, but some smouldering was still being seen on 22 January, when the company last updated its webpage dedicated to the incident.

Did Vistra Energy burn the batteries inside a building?

According to a statement that site owner Vistra Energy gave to the New York Times, most of the batteries inside the affected building (the one that houses the 300MW array) burned. However, the company doesn't have an exact tally,

because crews are still prohibited from going inside to do a visual inspection.

Why are new energy storage facilities safer?

One reason is that many newer sites use a different chemistry that's considered safer. Newer energy storage facilities also tend to isolate batteries better, so small fires won't spread as dramatically as they did in this case. There's still a lot we don't know about this fire, particularly when it comes to how it started.
