

# Photovoltaic energy storage financing

## Overview

---

Can you finance a solar energy storage project?

Since the majority of solar projects currently under construction include a storage system, lenders in the project finance markets are willing to finance the construction and cashflows of an energy storage project. However, there are certain additional considerations in structuring a project finance transaction for an energy storage project.

Why do energy storage projects need project financing?

The rapid growth in the energy storage market is similarly driving demand for project financing. The general principles of project finance that apply to the financing of solar and wind projects also apply to energy storage projects.

Are energy storage projects different than power industry project finance?

Most groups involved with project development usually agree that energy storage projects are not necessarily different than a typical power industry project finance transaction, especially with regards to risk allocation.

What drives the value of a PV system to residential customers?

Residential customers are typically driven by up front capital costs of the system. For this reason, OEMS have been driven to develop standardized systems easily incorporated into the surrounding PV system. The value of the energy storage system to residential customers is driven by both their physical and economic situation within the grid.

Are solar and wind projects a good investment?

These projects will have long-term predictable revenue streams. In addition, lenders may be willing to finance merchant cashflows, but with less leverage and subject to detailed market studies and cash sweeps. These trends for solar and wind projects also apply to energy storage projects.

Will a tax credit be available for energy storage projects?

However, with the passage of the Inflation Reduction Act of 2022, tax credits are now available for standalone energy storage systems, and thus lenders may be willing to provide bridge capital that is underwritten based on the receipt of proceeds from an anticipated tax equity investment, similar to renewable energy projects.
