

# Proxy mode energy storage

## Overview

---

What is the participation comparison - proxy demand Dr Dr and NGR?

The Participation Comparison - Proxy Demand, Distributed Energy Resource Provider, Storage, and Load Forecast Adjustment is a reference document used to help distinguish between the ISO's Distributed Energy Resources (DER), Demand Response (DR) and Non-Generator Resource (NGR) market participation model.

What is proxy demand resource - load shift resource (PDR-LSR)?

Proxy demand resource - load shift resource (PDR-LSR) allows storage resources to bid decreases and increases in load. It requires two separate resource IDs for load curtailment, which can bid from the net benefits test threshold price up to the bid cap, and for load consumption, which can bid from less than \$0 to the bid floor.

Does the ISO support co-located energy storage?

The ISO has extended the co-located energy storage features under the completed and implemented Energy Storage Enhancements initiative. See the Energy Storage Enhancements 2022 presentation. More information is available on the Energy storage and distributed energy resources initiative page.

Can I pseudo-tie energy storage resources into the California ISO balancing authority area?

Information for market participants who wish to pseudo-tie storage resources into the California ISO Balancing Authority Area. The ISO has extended the co-located energy storage features under the completed and implemented Energy Storage Enhancements initiative. See the Energy Storage Enhancements 2022 presentation.
