

Research and design plan for fuel cell energy storage device

Overview

What is the fuel cell technologies subprogram?

The Fuel Cell Technologies subprogram applies innovative research, development, and demonstration (RD&D) to develop a diverse portfolio of low-cost, durable, and efficient fuel cells that are competitive with incumbent and emerging technologies across applications.

What are the design considerations for a fuel cell?

The design considerations include isolation levels, input/output current and voltage characteristics, parallel/series fuel cell stacks, current leakage pathways, operating efficiency, thermal management, and single/bi-directional power flow.

What are fuel cells & why are they important?

Fuel cells efficiently convert the chemical energy of hydrogen or other fuels into electricity and are an important part of a comprehensive portfolio of solutions to achieve a sustainable and equitable clean energy future.

Does fuel cell material development impact program goals?

The fuel cell work seems to be far from commercially relevant because of durability challenges, so it is not certain the material development will have a significant impact on the fuel cell industry or Program goals. The electrolysis work appears to be closer to impacting Program goals. This project was rated 3.3 for effective and logical planning.

Are fuel cell designs suitable for heavy-duty vehicles?

The purpose is to create durable and efficient fuel cell designs suitable for adoption by the heavy-duty (HD) vehicle market. This project was rated 3.9 for identifying and addressing objectives and barriers and for project design, feasibility, and integration with other relevant efforts.

Should power electronics be included in a fuel cell design boundary?

Power electronics (boost converter) are both critical and expensive parts of the fuel cell system. They should be included in the fuel cell system design boundary. The cost of power electronics (such as a boost converter) is unclear. This cost should be incorporated into the cost assessment.
