

# **Residential ESS project financing options in Kuwait 2030**

## Overview

---

What is the sustainable living environment axis in Kuwait Vision 2035?

The sustainable living environment axis in Kuwait Vision 2035 consists of 5 projects, the most prominent of which is to provide housing care to citizens. These projects are planned to ensure the provision of 65.5 thousand housing units through 5 projects costing about 3.22 billion dinars. The last of these projects is scheduled to end by 2029.

Should ESS be used in a solar auction?

Although some auctions are focused on ESS or solar plus storage, deployment targets emphasize only renewable energy generation and do not account for energy storage systems. Moreover, some regulations may be unfavorable to the deployment of ESS, such as the net-metering scheme on a flat tariff.

Which countries are setting record low tariffs for solar energy projects?

Saudi Arabia and the UAE have been setting record low tariffs for solar energy projects. In Saudi Arabia, each of the two awarded rounds of the Renewable Energy Project Development Office (REPDO) auctions, totaling 2.17 GW, in addition to the PIF-led projects, has received record-low prices.

Why should we invest in ESS?

While ESS creates an opportunity to stabilize the grid and displace some of the reliance on diesel generators in countries suffering from power crunches, the latter's typical high political and economic risks drive up the risk premiums and cost of financing.

Which countries are implementing PHS projects in MENA?

In MENA, Morocco's National Office of Electricity implemented two PHS projects in Agadir and Afourer in 2013, with capacities of 350 MW/2,800 MWh and 465 MW/3,720 MWh, respectively. An additional 250 MW PHS project is under construction in Hatta, UAE, to be operated by the Dubai Electricity and Water

Authority (DEWA).

How ESS can help reduce electricity curtailment?

ESS can play a central role in reducing curtailment by ensuring that the generated electricity is stored for when it is needed, while providing flexible ramp-up. ESS can also provide capacity firming, energy arbitrage, frequency regulation, among other ancillary services<sup>6</sup>.
