

School solar storage capital expenditure estimate 2025

Overview

This paper presents a practical optimization method for sizing PV systems and battery storage in resource-constrained schools, coupled with a tailored scheduling strategy to address their unique energy demands.

This paper presents a practical optimization method for sizing PV systems and battery storage in resource-constrained schools, coupled with a tailored scheduling strategy to address their unique energy demands.

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory report. This amount represents an almost 30% increase from 2024 when 48.6 GW of capacity was installed, the largest.

- Developers expect to build of new capacity in 2025. 23 GW of capacity is already under construction or complete and awaiting final commercial operation. If all projects reached completion— which isn't guaranteed—capacity would grow by 3% in 2025. Developers in Texas expect to build 11.5 GW of new.

Date of Analysis: Data used is as of January 2025 Download as an excel file instead: <https://~adamodar/pc/datasets/wacc.xls> For global datasets: https://~adamodar/New_Home_Page/data.html can be obtained by clicking here on which companies are included in each.

Deploys solar + energy storage on all or most schools in the State. Reduces school operating costs, creating resources for teachers and students. Secures IRA tax credits to fund 30%, 50%, or more of installation costs. Moves school districts towards net zero. Supports thousands of clean energy.

According to EIA's latest Preliminary Monthly Electric Generator Inventory report, the U.S. power grid is expected to add 63 gigawatts (GW) of new utility-scale electric-generating capacity in 2025. Most of this growth will come from solar power and energy storage, showing strong momentum for clean.

The US solar industry installed 7.5 gigawatts direct current (GW dc) of

capacity in Q2 2025, a 24% decline from Q2 2024 and a 28% decrease since Q1 2025. Solar accounted for 56% of all new electricity-generating capacity added to the US grid in the first half of 2025, with a total of 18 GW. How much solar capacity will be added in 2025?

We expect this trend will continue in 2025, with 32.5 GW of new utility-scale solar capacity to be added. Texas (11.6 GW) and California (2.9 GW) will account for almost half of the new utility-scale solar capacity addition in 2025.

What if all projects are completed in 2025?

If all projects reached completion— which isn't guaranteed—capacity would grow by 3% in 2025. Developers in Texas expect to build 11.5 GW of new capacity in 2025, 30% more than in 2024. California will likely build close to 3 GW of new capacity.

Can solar power be used in schools and hospitals?

Although extensively studied in the context of larger distribution grids (Boonluk et al., 2020, Pompern et al., 2023), research on smaller-scale PV applications for individual buildings, such as schools, homes, and hospitals, remains limited (Tostado-Véliz, Icaza-Alvarez, & Jurado, 2021).
