

# **School solar storage cost breakdown in Ukraine 2025**

## Overview

---

This report presents the conceptual design, costs, and benefits of integrating solar photovoltaics (PV) and battery energy storage systems (BESS) into critical community facilities in Chernihiv, Ukraine.

This report presents the conceptual design, costs, and benefits of integrating solar photovoltaics (PV) and battery energy storage systems (BESS) into critical community facilities in Chernihiv, Ukraine.

This report presents the conceptual design, costs, and benefits of integrating solar photovoltaics (PV) and battery energy storage systems (BESS) into critical community facilities in Chernihiv, Ukraine. Preschool No. 4. Chernihiv community members and NREL subject matter experts have contributed.

We install solar stations with electricity storage systems with capacities of 10-30 kWt, depending on the school's needs. This solution allows you to: ensure a backup power supply without electricity for about 3-5 hours. The 100SolarSchools campaign is also intended to promote green energy.

Residential power prices have doubled since 2021 and are expected to climb further as subsidies unwind—shortening payback on a typical 10 kW hybrid system from 10-15 years (pre-war) to 4-5 years today. Corporate economics. Electricity can account for up to 25 % of manufacturing costs; CFOs now.

Under the UNDP Green Energy Recovery Programme in Ukraine, 13 solar power plants will be installed in 2025, at 8 hospitals and 5 schools, providing an overall capacity of 1.1 MW with energy storage systems totalling 2.3 MWh. The project is expected to save the hospital approximately UAH 1.5 million.

The installation of 47 solar panels, capable of generating 20 kW of power, alongside a 40 kWh energy storage system, will secure the school's energy supply during outages and substantially reduce its energy costs, saving an estimated €2100 annually. This setup not only provides a reliable power.

PVTIME - Despite the ravages of war, Ukraine achieved significant growth in the PV market in 2024, with new installed capacity reaching 800-850MW in

2024, according to the Association of Solar Energy of Ukraine (ASEU). This growth was driven mainly by the reliance on self-consumption of PV systems.

## School solar storage cost breakdown in Ukraine 2025
