

# Seiko v175 solar battery

## Overview

---

What is a Seiko V175?

The Seiko caliber V175 (actually marked V175A) is a solar powered chronograph movement. It is a repairable movement with exposed testing pads for checking the electrical components when troubleshooting is necessary. This caliber is made in Japan and is found in Seiko branded timepieces.

Is the V175 a solar powered watch?

The caliber V175 is a solar powered watch with a manganese titanium-lithium rechargeable capacitor. It is not a normal battery.

Does the Seiko V175 have a low power indicator?

Seiko states that this can include using the chronograph for up to an hour per day. There is a low power indicator on the V175. When the power is low, the small seconds hand at 9:00 will skip, ticking at 2 second intervals. During this low power mode, the chronograph will not function until the watch is recharged.

What is a Seiko vxxx caliber?

It is a repairable movement with exposed testing pads for checking the electrical components when troubleshooting is necessary. This caliber is made in Japan and is found in Seiko branded timepieces. This caliber is part of the Seiko Watch Corporation V (VXXX) family/series of solar powered movements.

How long does a V175 take to charge?

The V175 is a solar powered movement, meaning the watch is powered by light which reaches the dial and gets converted into electrical energy which is stored in the battery/capacitor. The chart below shows how long different lights sources can take to fully charge the cell in the V175. This ranges from 150 hours to 5 hours of constant light source.

What does low power mean on a V175?

There is a low power indicator on the V175. When the power is low, the small seconds hand at 9:00 will skip, ticking at 2 second intervals. During this low power mode, the chronograph will not function until the watch is recharged. The caliber V175 is a solar powered watch with a manganese titanium-lithium rechargeable capacitor.
