

# Solar cents per kwh

## Overview

---

Strong ROI Fundamentals: Most homeowners achieve 6-10 year payback periods and save \$31,000-\$120,000 over 25 years, with solar electricity costing 6-8 cents per kWh compared to 16.44 cents for grid power.

Strong ROI Fundamentals: Most homeowners achieve 6-10 year payback periods and save \$31,000-\$120,000 over 25 years, with solar electricity costing 6-8 cents per kWh compared to 16.44 cents for grid power.

Strong ROI Fundamentals: Most homeowners achieve 6-10 year payback periods and save \$31,000-\$120,000 over 25 years, with solar electricity costing 6-8 cents per kWh compared to 16.44 cents for grid power. Solar power costs have reached historic lows in 2025, making home solar more affordable than.

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type.

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

Back in 1977, the price of solar panels per Watt of power was \$76. Today, the average price is as low as \$2-3 per Watt of installed solar capacity. With these prices, the solar savings increase and the solar panel cost is low enough that your solar panels save more than they cost to install. So why.

On average, residential solar installations range from \$24,000–\$36,000 after applying federal tax credits. A 15,900 kilowatt-hour (kWh) system of 18–34 panels for a standard three-bedroom home costs an average of \$24,222, according to our survey. However, solar costs can vary widely depending on. How much does a solar system cost per kWh?

This number, the cost per kWh is then used to compare that price to the price you pay to your electricity company. Generally speaking, a typical solar system in the U.S. can produce electricity at the cost of \$0.06 to \$0.08 per kilowatt-hour.

How much does solar power cost in 2025?

Take control of your energy costs with solar power. Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025.

How much does a 5kw Solar System cost?

According to the National Renewable Energy Laboratory (NREL), a typical U.S. household installs a 5kW solar system. The solar panel cost is a portion of the total price you have to pay for installing solar panels. At the current average cost of \$2.71 per Watt, a typical 5kW system will cost you \$13,550.

How much do solar panels cost?

Solar panels themselves represent only 12-18% of total system cost, typically \$0.30-\$0.50 per watt. Premium monocrystalline panels offer 20-22% efficiency but cost more than standard panels with 18-20% efficiency. Panel type significantly impacts both cost and performance:.

How much does a solar system save on energy costs?

On average, homeowners with a complete solar system save \$41,000 to \$62,000 on total avoided energy costs over 25 years. It all depends on what your local utility charges for electricity, according to Robert Flores, a solar expert at The University of California, Irvine’s Clean Energy Institute.

How much does a 5000 watt solar system cost?

A fully installed solar system typically costs \$3 to \$5 per watt before factoring in incentives like the 30% tax credit. Using this measurement, 5,000 Watt

solar system (5 kW) would have a gross cost between \$15,00 and \$25,000. The price per watt for larger and relatively straightforward projects are often within the \$3-\$4 range.
