

Solar diesel hybrid storage cost vs benefit calculation in Romania

Overview

Are energy storage technologies commercially available in Romania?

This study investigated the feasibility of energy storage technologies that are commercially available on the Romanian market by using the levelized cost of storage (LCOS) method. The proposed approach also considers subsidies and different battery energy storage system' (BESS) technical parameters.

How much solar energy is injected into the grid in Romania?

As shown in Fig. 1, the share of RES in the total amount of electricity injected into the grid by the dispatchable producers increased from 35.4 % in 2013 to 44.39 % in 2020. Fig. 1. Romania electricity mix . In 2019 the Romanian Parliament adopted the prosumer law to encourage the increase of solar electricity injected into the grid.

Should electricup beneficiaries buy a battery energy storage system?

Considering that “ElectricUp” beneficiaries can purchase a battery energy storage system (BESS) at a reduced price and combining this with the lower cost of each surplus kWh injected into the grid, the option of integrating a BESS becomes more attractive.

How much LCoS does a battery cost in Romania?

To be considered profitable, the LCOS of the battery must be less or equal to electricity unit price paid by the customer. The electricity price considered for Romania is 0.1734 €/kWh, which is the average price in the first quarter of 2021, according to EU statistics .

What is a hybrid energy management system (EMS)?

Hybrid systems that combine RESs with conventional sources are gaining popularity for their improved supply reliability and resolution of RESs' intermittency and non-dispatchability issues. efficient energy management systems (EMSs) are crucial for optimizing these hybrid systems and

maximizing their economic environmental benefits.

Can EMS achieve sustainable and economically viable operation for hybrid renewable power stations?

By assessing the EMS's ability to balance these multiple objectives, this simulation case demonstrates its effectiveness in achieving a sustainable and economically viable operation for hybrid renewable power stations.
