

Solar hot water battery

Overview

Owners of electric hot water systems can configure them to heat the water when the sun is out to take advantage of abundant solar energy: all that hot water is stored, insulated inside a tank, ready for when you need it, serving as a thermal battery. Can hot water be used as a battery?

The answer is simple: use your hot water as a battery. Owners of electric hot water systems can configure them to heat the water when the sun is out to take advantage of abundant solar energy: all that hot water is stored, insulated inside a tank, ready for when you need it, serving as a thermal battery.

Can a solar panel charge a thermal battery?

If you had a heat-collecting solar panel (directly heating air or liquid rather than generating power with photovoltaics), you can use that to charge your thermal battery. Envision this - a large tank of wax (or water) that is warmed by heated coils from a solar collector.

Is your hot water system making the most of Cheap solar energy?

There are a number of different approaches to ensuring your hot water system is making the most of cheap solar energy. UNSW project lead Dr Baran Yildiz tells SolarQuotes he recommends using a heat pump's inbuilt timer (check our comparison table to confirm which systems have one and what type if so), or buying an external timer. Yildiz says:

Is solar the future of hot water?

The future of hot water is electric — and especially for homes with a solar system — a hell of a lot cheaper. But what good is solar when you need to do that last load of dishes after dinner or an evening shower before heading to bed?

The answer is simple: use your hot water as a battery.

Can a hot water heat pump be used as a thermal battery?

It's a nightmare when we do it with a gas stove, yet millions of Australians are essentially doing this every day to keep their water piping hot. There's a more efficient alternative: use a hot water heat pump as a thermal battery. All over the country, steam rises from water kept piping hot by the lick of blue flames.

Can solarquotes be used as thermal batteries?

SolarQuotes in-house installer Anthony Bennett says that both options can be effectively used as thermal batteries: "A typical 300 litre hot water unit stores approximately 14 kWh of energy when heated to 60°C from an ambient temperature of 20°C.
