

# **Successful bid price of NMC battery storage project in China 2025**

## Overview

---

The knockout price was a bid of US\$51.59/kWh for a four-hour battery (the average was US\$59c/kWh), which Energy Storage News says represents a 30% drop from 2024 levels, and other side was a 15% fall from recent record lows.

The knockout price was a bid of US\$51.59/kWh for a four-hour battery (the average was US\$59c/kWh), which Energy Storage News says represents a 30% drop from 2024 levels, and other side was a 15% fall from recent record lows.

The price for big battery storage modules have hit a record low in the latest giant auction in China, where more than 70 bidders competed for 25 gigawatt hours of capacity in what is being described as a “watershed moment” for the industry. Battery storage has already emerged as the most compelling.

The procurement exercise has attracted 67 battery energy storage companies but only six have emerged as winners. The average bid stood at CNY 0.473/Wh (\$65/kWh). Public procurements in China continue to demonstrate exceptionally low price levels for lithium-ion phosphate (LFP) battery energy.

it in rechargeable batteries for use at a later date. When energy is needed, it is released from the BESS to power demand to lessen any he integration of demand- and supply-side management. An augmented focus on energy storage development will substantially lower the curtailment rate of renewable.

State-owned EPC firm China Power Construction Group (Power China) recently concluded a 16GWh BESS supply tender, which resulted in extremely low prices amidst a squeezing of market share and increased buying power from state-owned companies, an S&P analyst told Energy-Storage.news. The tender for.

China Energy Engineering Corporation’s (CEEC) auction for 25 GWh of lithium-iron-phosphate (LFP) battery systems resulted in a record-low quoted tariff of CNY 0.37/Wh (~\$0.051), a 30% year-over-year decrease from 2024. The

tender was structured into three packages based on system duration and.

The average winning bid price for 2-hour lithium iron phosphate (LFP) energy storage systems in 2024 was 86 \$/kWh, down 43% compared to the average price in 2023. A number of factors played a part in low price cells beyond the usual cutthroat competition. China has become increasingly competitive.

## Successful bid price of NMC battery storage project in China 2025
