

Successful bid price of home battery pack project in India 2026

Overview

The costs of lithium-ion battery pack prices have come down dramatically in the past few years, from approximately 13860 INR/kWh (165 USD/kWh) in 2020 to 8388 INR/kWh (100 USD/kWh) in 2025 on a global basis for all chemistries.

The costs of lithium-ion battery pack prices have come down dramatically in the past few years, from approximately 13860 INR/kWh (165 USD/kWh) in 2020 to 8388 INR/kWh (100 USD/kWh) in 2025 on a global basis for all chemistries.

Recent energy storage auctions in India reveal record-low prices, with unsubsidized standalone battery storage bids at 2.8 lacs/MW/month and solar+storage bids at 3.1–3.5 INR/kWh. Our analysis, based on implied solar and storage costs from these bids and bottom-up global cost estimates, shows that a.

Battery pack prices sink to \$55/kWh — Will this spark India's energy storage surge?

Battery prices have fallen by nearly 50 per cent to around USD 55 per kilowatt-hour (kWh) in recent months, resulting in a significant correction in energy storage system tariffs, according to a report released by.

Keep in mind that India's Central Electricity Authority (CEA) has projected the need for a total installed Battery Energy Storage System (BESS) capacity of 41,650 MW/208,250 MWh as part of the installed capacity in 2029-30. This will be in addition to 18,986 MW of Pumped Hydro Storage Systems.

The government launched a ₹37.6 billion (~\$452 million) viability gap funding program to support the installation of 4 GWh of BESS by the financial year 2026. In 2024, tenders to develop projects with 3,625 MW/8,100 MWh of standalone BESS were floated by various agencies in India. Here are the top.

Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/1000 MWh BESS. The government

has launched viability gap funding and Production-Linked Incentive (PLI) schemes to make battery storage affordable. RK Singh, India's minister for.

The Union Minister for Power and New & Renewable Energy has informed that in the tariff-based competitive bid for installation of 500 MW / 1000 MWh Battery Energy Storage System (BESS) by the Solar Energy Corporation of India (SECI), the capacity charge discovered is Rs. 10.83 lac / MW / month. Are battery prices rising in India?

Indian battery prices are still slightly higher at USD 70–80/kWh. Battery costs constitute over 50 per cent of BESS capital expenditure. The report states that viability gap funding (VGF) of up to 40 per cent, capped at ₹2.7 million/MWh, continues to play a critical role in ensuring tariff sustainability.

What is the new ceiling for bids in 2024?

In 2024, besides the July response at Rs 3.41, even GUVNL managed to attract bids at Rs 3.72 from Gensol, further establishing the sub Rs 3.75 benchmark, widely considered as the new ceiling for bids now. Yes, most of these bids have come in for lower duration backup of 4 hours, but even that is set to change sooner than expected now.

How do I get more bids to win a project?

Turn more bids into wins. Get the strategic intelligence you need to identify and secure the most profitable tender opportunities for your business. Shortlist the project tenders that align with your business goals. Make positive connections with key stakeholders.
