

# Successful bid price of utility scale ESS project in Tanzania 2025

## Overview

---

What is a utility-scale energy storage project?

It concerns the products and services for the various use cases of energy storage, including development, construction, operation and maintenance. Utility-scale projects tend to be project financed, which implies that the energy storage system (or the larger project of which it is a part) is owned by a project company (or special purpose vehicle).

How can private-sector participation support Tanzania's Energy Transition & Development Goals?

Create an enabling environment for private-sector participation in the energy sector to mobilize a total of US\$ 4.039 billion in private investments to support Tanzania's energy transition and development goals.

Why do we use a single cost for 2024?

Although there is uncertainty in the 2024 cost (which is discussed later), we use a single cost for 2024 for convenience as we apply these costs in our long-term planning models (applying the same costs in 2024 means that the 2024 solution will not change as we shift from a "high" to a "mid" to a "low" cost projection for storage).

How much will Bess cost reduce by 2035?

Forecasted cost reductions for small and medium sized systems of ~26% for small-scale Li-ion and ~23% for small -scale lead acid by 2035 to end- users will not make a significant change in the proposition of BESS for these small-scale projects.

Is NMC a good choice for utility-scale ESS?

NMC is still one of the most popular choices for utility-scale ESS. Variation in the ratios of Ni-Mn-Co allows the system characteristics to be tailored to specific applications. Increasing the share of nickel favours higher specific

energy, while also improving thermal stability and cycle life.

Will a Bess project start in 2021?

As opposed to a project start in 2021 (see Figure 21) the energy storage capacity of the BESS can be increased by another 25%. With 2025 forecasted Li-ion prices, a further reduction in LCOE is achieved by offsetting diesel consumption and capitalising on cheaper batteries.

## Successful bid price of utility scale ESS project in Tanzania 2025
