

Talent gap in energy storage industry

Overview

Among energy sector employers, 71% struggle to find the skilled talent they need, according to Manpower. The shortage of skilled workers is fueled by a sharp rise in energy demand, which is expected to double by 2050, based on a McKinsey report.

Among energy sector employers, 71% struggle to find the skilled talent they need, according to Manpower. The shortage of skilled workers is fueled by a sharp rise in energy demand, which is expected to double by 2050, based on a McKinsey report.

Amid increased demand, an aging workforce, and decreased recruitment levels, the energy sector's talent pool is under pressure. Five strategies can help executives fill their talent pipeline. As the energy transition gathers pace, there is an increasing need for energy talent. The global demand for

The energy sector is experiencing a talent crisis. Despite concerns about Trump's move to cut Inflation Reduction Act funding for renewables, experts anticipate that long-term energy sector trends will remain steady, given private companies' investments, global momentum in renewables and oil and

The energy industry has faced a decade-long talent problem. The sector is not seen as either high-tech or sustainable. Energy needs new, ambitious, and diverse talent to find its best self—that includes addressing the climate and broader sustainability emergency and adapting to developing.

Energy storage solutions, particularly lithium-ion batteries, are pivotal for managing the intermittent nature of renewable energy resources like solar and wind, providing the necessary balance and reliability to our power grids. However, this growth brings a unique set of challenges—chief among

As the demand for renewable energy solutions continues to surge, the industry is battling a widening skills gap that must be addressed quickly to meet global carbon emission goals. In this blog, we delve into the pressing issue of talent shortages within the renewable energy sector, examining the

The main volume drivers for batteries are currently electric vehicles and stationary energy storage. However, future applications will be diverse, and the energy transition will require an orders-of-magnitude increase in production. This expansion will require innovative minds with the right skills. Are energy and materials companies attracting and retaining talent?

Competition for employees is also heating up. Since 2016, out of all the employees who left their roles in energy and materials companies, 42 percent moved to a different industry. ⁹ This underlines the very competitive nature of attracting and retaining talent within the sector.

Why is hiring talent a problem in the energy sector?

Hiring talent to backfill critical roles and fill new roles presents a unique set of obstacles in the energy sector. Experienced workers are retiring, mid-tenure employees have new opportunities in adjacent industries, and data indicates that fewer new employees are entering this workforce.

Should energy firms invest in workforce development?

Energy firms that invest in workforce development today—partnering with communities to strengthen the talent pipelines, raising awareness of career opportunities, expanding outreach and cultivating inclusive workplaces—should emerge in a stronger position to tackle the sector’s worsening talent shortage.

Why do energy companies struggle to find skilled workers?

Among energy sector employers, 71% struggle to find the skilled talent they need, according to Manpower. The shortage of skilled workers is fueled by a sharp rise in energy demand, which is expected to double by 2025, based on a McKinsey report. Both fossil fuels and renewables are affected, albeit for different reasons.

Why should energy companies reach out to untapped workers?

Reaching out to untapped workers expands the talent pool, too. This includes purposeful outreach to women and Black or African American workers. Women represent just 26% of the energy workforce, significantly lower than their 47% share of the overall U.S. workforce.

Are renewables a key driver of growth in energy jobs?

Renewables are poised to be a key driver of growth in energy jobs. The two fastest growing occupations are in renewable energy: wind turbine service technician jobs are projected to grow by 60% and solar photovoltaic installers by 48%, according to the U.S. Bureau of Labor Statistics.
