On September 9, 2025, Tesla unveiled the next generation of its utility-scale battery systems — the Megapack 3 and a new Megablock product — designed to accelerate deployment, increase per-unit energy density, and lower project timelines for grid-scale storage.

On September 9, 2025, Tesla unveiled the next generation of its utility-scale battery systems — the Megapack 3 and a new Megablock product — designed to accelerate deployment, increase per-unit energy density, and lower project timelines for grid-scale storage.

Megapack is a powerful battery that provides energy storage and support, helping to stabilize the grid and prevent outages. By strengthening our sustainable energy infrastructure, we can create a cleaner grid that protects our communities and the environment. The future of renewable energy relies.

Tesla's long-anticipated innovation in utility-scale battery storage has yielded two new products, marking a leap toward faster deployment, greater scalability, and higher energy density. Tesla has unveiled much-anticipated additions to its energy storage lineup, the Megapack 3 and Megablock – both.

On September 9, 2025, Tesla unveiled the next generation of its utility-scale battery systems — the Megapack 3 and a new Megablock product — designed to accelerate deployment, increase per-unit energy density, and lower project timelines for grid-scale storage. These products aim to reshape how.

Tesla is updating its utility-scale Megapack batteries as it seeks to stem the decline of its lucrative energy-storage business. The new battery product known as Megapack 3, which Tesla revealed late Monday, is a bid to lure utilities and data center developers that are desperate for power.

Tesla has been a leader in using large Li-ion batteries for stationary energy storage. It began in 2015 with the Powerwall and Powerpack, but today, most of Tesla's energy storage capacity is deployed through the Megapack, a container-sized battery system that can be deployed in series to provide.
