

The latest risk avoidance plan for the energy storage industry

Overview

With the 2026 edition of NFPA 855 expected to be finalized and published in 2025, the energy storage industry is already incorporating key enhanced requirements and is ready to work with states and local governments to implement the latest version of the standard.

With the 2026 edition of NFPA 855 expected to be finalized and published in 2025, the energy storage industry is already incorporating key enhanced requirements and is ready to work with states and local governments to implement the latest version of the standard.

WASHINGTON, D.C., March 28, 2025 — Today, the American Clean Power Association (ACP) released a comprehensive framework to ensure the safety of battery energy storage systems (BESS) in every community across the United States, informed by a new assessment of previous fire incidents at BESS.

The International Renewable Energy Agency predicts that with current national policies, targets and energy plans, global renewable energy shares are expected to reach 36% and 3400 GWh of stationary energy storage by 2050. However, IRENA Energy Transformation Scenario forecasts that these targets.

Clean energy trade body American Clean Power Association (ACP) has released a battery energy storage system (BESS) safety framework outlining key actions and policy recommendations for the industry. The Battery Energy Storage: Blueprint for Safety was informed by an assessment conducted by the Fire.

Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation

of renewable energy sources and other disruptions. While BESS technology is designed to bolster grid reliability, lithium battery fires at some.

The energy storage industry's trajectory in recent years has been nothing short of remarkable, driven by increased customer recognition of these assets' critical roles in grid services, electricity reliability needs, and renewable energy integration. This rapid evolution of the BESS sector also.
