

# Thoughts on energy and heat storage in small hydropower stations

## Overview

---

Can conventional hydropower stations be converted into pumped storage facilities?

This research establishes a comprehensive framework for the conversion of conventional hydropower stations into pumped storage facilities, offering a model for medium-small scale pumped storage and distributed generation technologies.

Can small hydropower stations be transformed into hybrid PSH facilities?

By focusing on the transformation of small hydropower stations, this research aims to explore the feasibility and constraints of converting conventional hydropower stations into hybrid PSH facilities, and to assess the potential of small-scale PSH systems in supporting distributed renewable energy sources.

What is pumped storage hydropower (PSH)?

Pumped Storage Hydropower (PSH) is an essential renewable energy technology that balances electricity supply and demand within power grids. Although PSH projects involve high construction and operational costs, their long-term economic benefits are significant.

Can Jiangshantou pumped storage hydropower station improve power regulation?

The analysis indicates that Jiangshantou Pumped Storage Hydropower Station will serve as the primary mechanism for power regulation. Furthermore, a small-scale integrated hydropower-wind-solar power system is proposed to ensure stable system output, improve the input-output ratio, and enhance the efficiency of renewable energy utilization.

What are the characteristics of small hydropower stations?

Preliminary analysis indicates that the small hydropower stations in the county are characterized by small individual capacities, a high number of stations,

and older construction periods, many of which serve multiple purposes.

How can hydropower support a new power system?

Hydropower, known for its high efficiency, flexible operation, and low unit output cost, can effectively support the new power system by balancing the variability of wind and solar power 14, 15.
