

# **Total investment cost of commercial energy storage project in Greece**

## Overview

---

The total budget available is EUR 238 million, which is expected to fund approximately 30,000 battery systems by mid-2024. For households looking to install solar PV under the program, it will be mandatory to add battery storage; for farmers, storage will be optional.

The total budget available is EUR 238 million, which is expected to fund approximately 30,000 battery systems by mid-2024. For households looking to install solar PV under the program, it will be mandatory to add battery storage; for farmers, storage will be optional.

So far, Greece has provided support to 900 MW of standalone storage projects under three previous auctions. The new plan, prepared by the Ministry of the Environment and Energy, calls for installing 4,700 MW of standalone battery projects across the country, equal to the entire projected capacity.

Starting in May 2023, Greek households and farmers are able to apply for public funds to cover the purchase and installation of small solar+storage systems up to 10.8kW (featuring up to 10.8kWh of storage). The grants can cover up to 75% of total cost of a system.<sup>10</sup> The total budget available is.

System: Benefits from avoidance of RES curtailment and load management versus system operation costs (ignoring financial performance of storage)

Private: Operating margin and capital cost recovery  
Positive externality analysis - is there a discrepancy between social and private optimum?

System.

This project is supported both with grants (38.5% of investment) and loans (11.5% of the investment). At the same time, the RRF fully supports investments in battery energy storage systems (both utility scale and small scale) with total capacities that could reach 1,200 MW. This outlook underlines.

The scheme will offer EUR 153.7 million (USD 157.6m) in financing, the Ministry of Environment and Energy said on Monday. Applications will be

accepted by February 28, 2025. The programme called "Storage Systems in Businesses" will allow commercial and industrial (C&I) parties to receive grant.

This article highlights key steps recently taken by the Greek State as regards the legal/regulatory framework and appropriate State aid schemes, to kickstart electricity storage activity and allow for an efficient and timely development of facilities. Currently there are four (4) storage plants. Should Greece invest in energy storage facilities?

Currently there is a growing interest for investments in storage facilities in Greece. Licensed projects mostly consist of Li-ion battery energy storage systems (BESS), either stand-alone or integrated in PVs, as well as PHS facilities .

How many MW of storage will Greece need by 2030?

The majority of the projects (2,650 MW) belong to Group Γ and will connect to ADMIE as follows per region. A key factor driving companies is that this large capacity will cover all the storage needs Greece will require by 2030.

How long should energy storage be in a Greek power system?

Considering the energy arbitrage and flexibility needs of the Greek power system, a mix of short (~2 MWh/MW) and longer (>6 MWh/MW) duration storages has been identified as optimal. In the short run, storage is primarily needed for balancing services and to a smaller degree for limited energy arbitrage.

How many storage plants are there in Greece?

Currently there are four (4) storage plants operating in Greece, two open-loop pumped-hydro storage (PHS) stations in the mainland (700 MW in total) and two small hybrid RES-storage stations in non-interconnected islands (just 3 MW).

Is a 'fever' gripping the new energy storage sector?

An investment 'fever' is gripping the new energy storage sector as the ministerial decision was published yesterday (March 14, 2025), setting the rules for installations with a total capacity of 4.7 GW in our country. So far, three auctions have supported 900 MW projects with subsidies.

What changes have been made to electricity storage in 2022?

In 2022 major interventions took place in the legal framework to establish the activity of electricity storage, with law 4951/2022 introducing the following:  
Typology of storage -FtM facilities and BtM storage in RES plants and prosumers. Streamlining of licensing procedure. Participation in all electricity markets.

## Total investment cost of commercial energy storage project in Greece
