Last September, Toyota announced plans for their improved lithium-ion batteries, as well as a "breakthrough" in solid-state battery technology. It's notable, because the company had been resisting its transition to electric vehicles (EVs), focusing instead on hybrids and vehicles powered by.

The Japanese automaker says it has found a new material that will help commercialize the elusive, long-awaited solid state battery, but it's light on details. The Lexus RZ (Credit: Toyota) Toyota says it has found a technological breakthrough that will allow it to bring solid state batteries to.

Toyota Motor Corporation (Toyota) announced today that the development and production plans for its next-generation batteries (performance version) and all-solid-state batteries were certified by the Ministry of Economy, Trade and Industry (METI) as part of the Japanese government's "Supply.

By reportedly solving this manufacturing puzzle, Toyota has not just announced a new battery. They have announced the beginning of the end for the internal combustion engine. They have vaporized the final, most stubborn arguments against going electric—range anxiety and long charge times. We are.

The company claims its solid-state batteries will offer a range of up to 745 miles on a single charge and can be fast-charged in 10 minutes or less. Toyota is also working on other battery technologies with improved performance and cost efficiency, aiming to have solid-state batteries on the road.
