

# Turnkey utility scale ESS EPC contract price in Korea

## Overview

---

What is ESS central contract market 2025?

South Korea launched the 2025 1st ESS Central Contract Market auction, offering 540 MW of capacity for energy storage projects across the mainland and Jeju. This round expands coverage beyond Jeju, introducing refined procedures and stricter technical and operational standards based on lessons from the initial pilot.

What is an EPC contract?

An EPC Contract delivers these requirements in a single integrated package, which is one of the major reasons why EPC Contracts are the most common form of construction contract used in project-financed utility-scale solar projects. The key clauses in any construction contract are those that impact on time, cost and quality.

What happens if the EPC contract is uncertain?

Any uncertainty in the EPC Contract may unfortunately see the Contractor liaising directly with these third parties and possibly risking the relationship of the Project Company with key influencers, customers and long-term neighbours.

What is a performance specification in an EPC contract?

Performance specification: Unlike a traditional construction contract, an EPC Contract usually contains a performance specification. The performance specification details the performance criteria that the Contractor must meet. However, it does not dictate how they must be met. This is left to the Contractor to determine.

What is an ESS unit & how does it work?

Often referred to as “electrical reservoirs,” ESS units play a vital role in managing renewable energy output. They store surplus electricity generated

from sources like solar power during periods of low demand and release it when demand peaks, functioning as auxiliary batteries that stabilize the grid.

What are the disadvantages of an EPC contract?

Another major disadvantage of an EPC Contract becomes evident when problems occur during construction. In return for a guaranteed price and a guaranteed completion date, the Project Company cedes most of the day-to-day control over the construction.
