

Upstream industries of energy storage sector

Overview

In general, the upstream of the energy storage industry chain is mainly manufacturers of energy storage materials and equipment, the midstream is integrators and solution providers of energy storage systems, and the downstream is sellers and service providers. What is the upstream segment of the energy industry?

The Exploration and Production (E&P) of petroleum and gas reserves is what's known as the upstream segment of the industry. It's the most complex, expensive, and dangerous part of the energy business. The upstream segment is a mammoth collection of government and private entities, further divided into hundreds of functions and expertise.

What are the activities in the upstream sector?

The upstream sector includes mineral rights acquisition (OEL, OPL, OML), exploration/appraisal activities, development activities, and production activities. Mrs. J. O. David-West, 39 22nd May, 2013.

Why do data centers need a high-temperature energy storage system?

Thermal storage and compressed-air energy storage (CAES) suit the region's hot climate and vast salt caverns, spurring exportable know-how in high-temperature storage designs. U.S. data centers could draw 6.7-12% of nationwide electricity by 2028, more than double 2023 levels.
