mpares BESS and PHS systems, exploring their effects on market prices and renewable integration. In its second phase, the project forecasts component-based electricity prices—including taxes, network tariffs, and ree storage scenarios were modelled for 2030, 2035, and 2040, combining BESS and PHS.

Elering has announced a tender for a manual frequency restoration reserve (mFRR) up-regulation service acquiring up to 500 MW of new dispatchable capacity (probably including batteries, gas turbine, gas engine and demand side response) in order to satisfy the growing need for ancillary services.

The report explores trends and forecasts across residential, commercial & industrial (C&I), and utility-scale battery segments, offering deep insights into Europe's energy storage landscape. With record growth in 2024 and new projections through 2029, the study highlights key market drivers.

Short-term energy storage would help solar panel owners to increase the profitability of their electricity production, which would also help keep the Estonian power system in balance, according to an analysis commissioned by the Foresight Centre. Märt Masso, expert at the Foresight Centre, noted.
