An energy storage system is defined in the 2022 Energy Code as one or more devices assembled together to store electrical energy and supply electrical energy to selected loads at a future time. A minimum of four branch circuits and their source at a single panelboard supplied by the ESS. At least one circuit shall supply:.

Are new single-family buildings energy storage ready?

To facilitate the future installation of battery storage systems, newly constructed single-family buildings with one or two dwelling units are required to be energy storage ready.

What is a battery energy storage system?

Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow of power to homes and businesses regardless of fluctuations from varied energy sources or other disruptions. However, fires at some BESS installations have caused concern in communities considering BESS as a method to support their grids.

Is ESS-ready interconnection equipment required?

Yes. Per § 100.1 - PDF ESS-ready interconnection equipment is defined as equipment, including but not limited to an ESS-ready panelboard, that can accommodate the connection of a distributed energy resource or an ESS capable of either automatic or manual isolation from the utility power source.

Will two duplex units meet the energy code ESS-ready requirements?

The 2022 Energy Code ESS-ready requirements in § 150.0 (s) - PDF apply to all single-family residences that include one or two dwelling units. Will both duplex units need to meet the Energy Code requirements separately?

Yes. Duplexes are considered two single-family homes.
