

# What is a storage torch

## Overview

---

```

class PyTorchStorage Tensor
Tensor Storage
Tensor Storage torch.is_storage
() Storage.

```

```

class PyTorchStorage Tensor
Tensor Storage
Tensor Storage torch.is_storage
() Storage.

```

```

class PyTorchStorage Tensor
Tensor Storage
Tensor Storage torch.is_storage () Storage
Tensor Storage Tensor Storage
obj storage True False
Storage.

```

In PyTorch, a regular tensor is a multi-dimensional array that is defined by the following components: Storage: The actual data of the tensor, stored as a contiguous, one-dimensional array of bytes. dtype: The data type of the elements in the tensor, such as torch.float32 or torch.int64. shape: A.

```

Torch Lua
PyTorch "torch" PyTorch
PyTorch Torch Python TypeError: can't convert
CUDA tensor to numpy. Use Tensor.cpu () to copy the tensor to host memory
TypeError: can't convert CUDA tensor to numpy. Use Tensor.cpu.

```

```

torch.Storage torch.Tensor
byte char CPU CPU
CUDA CUDA
device (int) - GPU id async (bool)
-True.

```

PyTorch torch.is\_storage() `obj` PyTorch `True` object:  
`True` `False` # A constant tensor of size n # Applying the  
is\_storage function and # storing the result in 'out' 4.555761437366413e-41  
3.906847023468105e-37 0.0 4.484155085839415e-44 0.0 # A constant  
tensor of size n.
